At $11.00 per bushel the BEST Hybrid Corn seeds cost you $1.50 per acre or less. Consider this before buying the Corn you intend planting. Even at half price you could save only 75c per ACRE. Can you afford to risk your time, fertilizer and land for a full season to save 75c per acre? The return that you get from your season's investment of work, land and money depend upon the quality of the seed you plant. WYATT'S Corn hybrids are produced under the strict supervision of specialists, carefully cleaned, graded, tested and chemically treated with ARASAN to protect it in the ground. For the maximum return for your investment—you can depend on WYATT'S Hybrids!

WYATT'S DEPENDABLE CORN HYBRIDS

F-27 NC-27 (Yellow) The picture at right taken in one of our crossing fields shows the fine appearance, high yield and uniformity of Wyatt's NC-27. This is the corn you get when you buy NC-27 in the Wyatt bag. No trouble getting into the 100 bushel per acre class with seed corn from those ears planted on good land, properly spaced and fertilized! In the 5 official tests in the Coastal Plain last year NC-27 averaged 108.7 bushels per acre, and in spite of a 35.8 yield in Guilford County, because of severe drought, it averaged 72.9 in the Piedmont, making 110 bushels per acre in Cleveland County. Besides a good yield record this hybrid has good grain quality and good stalk strength. **Prices: 8 lb. bag $2.40, postpaid.* Not prepaid, 8 lbs. $2.00; 14 lbs. (peck) $3.25; 28 lbs. (½ bu.) $6.00; 56 lbs. (bu.) $11.00.**

F-2 NC-26 (Yellow) A good 2 ear hybrid capable of yields well above 100 bushels per acre, properly managed on good land. In 5 separate tests last year in the Coastal Plain NC-26 averaged 108.8 bushels per acre. Good shuck coverage and average stalk strength. **Prices: 8 lbs. $2.40, postpaid.* Not prepaid, 8 lbs. $2.00; 14 lbs. (peck) $3.25; 28 lbs. (½ bu.) $6.00; 56 lbs. (bu.) $11.00.**

F-4 NC-1032 (Yellow) Recommended for the Piedmont and Coastal Plain where since 1943 it has consistently performed well among the very best hybrids. Official Coastal Plain 1947 average yield in 5 separate trials was 104.1 bushels per acre, one of only 7 hybrids averaging over the hundred bushel mark for the entire area. A dependable 2 ear yellow hybrid of good grain quality and storm resistance. **Prices: 8 lbs. $2.40, postpaid.* Not prepaid, 8 lbs. $2.00; 14 lbs. (peck) $3.25; 28 lbs. (½ bu.) $6.00; 56 lbs. (bu.) $11.00.**

F-25 NCT-20 (White) A good top-cross hybrid performing well on many farms from the Mountains to the lower Coastal Plain as indicated by 1947 official records of 91.9 bushels per acre in Ashe County and 126.2 in Camden. **Prices: 8 lb. bag $2.40, postpaid.* Not prepaid, 8 lbs. $2.00; 14 lbs. (peck) $3.25; 28 lbs. (½ bu.) $6.00; 56 lbs. (bu.) $11.00.**

F-3 Tennessee 10 (White) A consistently good white hybrid for the Coastal Plain, Piedmont and Mountain sections, where it held top place for yield until the introduction of Dixie 17. Last year in Camden County, Tennessee 10 officially turned out 142.1 bushels per acre and averaged 111.8 bushels per acre in all 5 trials. **Prices: 8 lb. bag $2.40, postpaid.* Not prepaid, 8 lbs. $2.00; 14 lbs. (peck) $3.25; 28 lbs. (½ bu.) $6.00; 56 lbs. (bu.) $11.00.**

F-26 Dixie 17 (White) The story of the popularity of this new hybrid is told plainly in the picture at right taken on a Piedmont farm this summer. Dixie 17 is a medium hard, white prolific hybrid with a red cob. Slightly more resistant to lodging and better shuck protection than Tennessee 10. Has out-yielded all other white corns in North Carolina official tests since its introduction 2 years ago, in both the Piedmont and Coastal Plain. Highest individual yield, 158.1 bushels per acre in Camden, and highest average, 124.4 Coastal Plain, of any corn in 1947 tests. **Prices: 8 lb. bag $2.40, postpaid.* Not prepaid, 8 lb. bag $2.00; 14 lbs. (peck) $3.25; 28 lbs. (½ bu.) $6.00; 56 lbs. (bu.) $11.00.**

N. C. Agricultural Extension Service Recommendations for Increasing Corn Yields

1. Have the soil tested and apply lime as recommended.
2. Prepare a good seedbed and plant level with the ground except where drainage is poor.
3. Use 300-500 lbs. of 6-8-6 or 4-8-8 at planting. Use the higher rates following crops receiving low amount of fertilizer and the 4-8-8 on potash deficient soils or following legumes for hay.
4. Avoid late, deep cultivation but control weeds early.
   Use a weeder where available until corn is six inches high. Cultivate shallow until the corn is 2½ feet high, and then stop cultivation. Do not use turning plow or bull tongue. Do not injure corn roots.
5. Place rows about 3½ feet apart.
6. Space plants about 16-20 inches apart within the row, using wider spacing for less fertile soils.
7. Sidedress with adequate nitrogen (potash where needed) when corn is 6-8 weeks old or about 2½ feet high. Yield increases of 25-45 bushels per acre may be expected by use of 500 lbs. of Nitrate of Soda, or 400 lbs. of Calnitro or ANL, or from 250 lbs. per acre of Ammonium Nitrate. One-fourth of this rate of application should give yield increases of 10-12 bushels per acre above similar corn receiving no sidedressing.

WYATT'S *Western Grown Muskmelons*

402 Cantaloupe, Rockyford Earliest

CULTURE: The Melon delights in warm rich soil with good drainage. Good Melons, however, can be grown on almost any land if the trouble is taken to dig holes 2 feet square, filling them with a rich compost of woodsmold and cow-pen manure. Plant three-fourths to one inch deep April or May in rows 6 feet apart, leaving not less than 4 feet between the hills, putting about 10 seeds to the hill. As insects are often very destructive, it is best not to thin at all until the plants are well started. When they are large enough to be safe, thin to two in a hill, and keep the ground mellow and free from weeds. Those who make a specialty of Muskmelons will find it advantageous to start the seed under protection of glass, so as to have the plants ready by the time seeds could be usually planted in the open ground.

VEGETABLE PLANTING CALENDAR

Many otherwise successful gardeners lose months of valuable production because of a failure to realize the cold hardiness of a number of the most popular and productive vegetables.

By successive plantings beet, broccoli, cabbage, carrot, chard, kale, mustard, onion, parsley, radish, spinach and turnip (salad or root) can be kept in production, out-of-doors and without protection winter or summer, every day in the year in this isothermal zone.

The planting information shown in the chart on this page is the result of careful preparation and years of actual gardening experience. Planting dates shown for tender varieties are based on the average U. S. Weather Bureau records of the last killing frost in the spring and the first killing frost in the fall in this zone, for the past 50 years.

Throughout our catalog we have endeavored to give the approximate number of days to maturity for all varieties. This information should be helpful, especially in determining the latest safe dates to plant tender varieties in the summer or fall, in order to make a crop before frost.

Soil conditions permitting, we recommend planting on or immediately after the average date of the last frost in the spring, otherwise spring rains may delay planting days or weeks.

"TESTED SEEDS"

The term "tested seeds" as used in this catalogue, and in all of our advertising means that every bag or package of seeds purchased at Wyatt's is supplied from a lot that has been carefully tested by the North Carolina Seed Testing Laboratory and the seeds are known to grow. Every lot of seeds reaching our warehouse is sampled and tested before the seeds are moved into our store for packaging or for sale in bulk. This accounts for the fact that "Wyatt's Tested Seeds" are more and more in demand in North Carolina and in the South.

Plant Wyatt's Tested Seeds and be sure of success.

WYATT'S POTASH FED DAHLIAS

WE LIST ONLY THE VERY FINEST DAHLIAS FOR SOUTHERN CULTURE

CULTURE—Dahlias thrive best in a sunny location. Work the soil to a depth of 8 inches and pulverize thoroughly, mixing with it dry sheep manure. Plant the bulbs, about 6 inches deep, laid flat with the eye up and cover with 2 inches of soil, filling in as the plants develop. For the largest flower, leave only the terminal bud to a single stem plant, pinching off all other buds as they appear, clear to the ground. For 4 to 6 fine, large flowers per plant, pinch out the top of plant, leaving 2 or 3 pairs of leaves. Water copiously.

Classification:

FD.—Formal decorative, petals broad and flat in an orderly arrangement. Example: Jersey Beauty.

ID.—Informal decorative, petals curled, twisted, or otherwise irregular. **SC.—Semi-cactus**, margins of the majority or the floral rays turned outward or backward for less than half their length, the rays being broad below. Example: Miss Elsie Jane. **MINIATURE**, flowers not exceeding three and a half inches in diameter except Pompons. **POMPON**, flowers small rarely exceeding two inches in diameter.

All prices include postage. Since stocks this year, as last, are limited it is advisable to list substitutes otherwise we shall use our judgment.

CULTURE

"Glads" are the most popular and easily grown of all summer-flowering corms (not true bulbs).

Soil requirements are not very exacting. Plant large corms 6" or more apart 4" to 6" deep, smaller ones accordingly, being governed by whether the soil is light or heavy. Plantings made at intervals of two to three weeks beginning in early April and continued until early July should flower from the latter part of June until frost. Good fertilizers include cow and sheep manures. Apply two to three times as a side dressing during the growing season before flowering. Fertilizers should not come in contact with corms or foliage. Watering during dry seasons will give amazing results.

Our stock is Michigan grown, disease and thrip free.

Early 70-80 days. Midseason—85-90 days. Late—100 days or more.

MORNING GLORIES

IPOMEAS. In growing Ipomeas (Morning Glories and Moonflowers), never plant until the soil is thoroughly warm. To aid germination of particularly hard-seeded varieties, filing a small notch at the top of the seed will help considerably. Always select the driest, sandiest part of the garden and sow where the plants are to flower as the Ipomeas resent transplanting. Plants should be kept on the dry side in order to induce early and abundant flowering with a rather sparse growth of foliage. Heavy watering will stimulate foliage growth at the expense of flowers. A poor soil is preferable to a rich one and fertilizer should not be used as this will promote heavy foliage which will hide the flowers.

Sow the small seeds in a warm, sunny, open place outdoors, thinning to 15 inches apart, or in frames for transplanting. Scatter seeds thinly, barely cover and firm soil over them; water seedlings with a fine spray to prevent drying out. The weakest looking seedlings usually produce the finest flowers, so save the weak plants for transplanting. Seed of the double and fringed sorts should be pressed into a shallow pot of sifted soil and covered with only a sprinkling of sand. The pot should be watered from below by placing it in water. Never allow to become too dry nor too moist.

F97 Alfalfa

WYATT'S RECLEANED

CLOVER SEEDS

F97 Alfalfa (Oklahoma Approved) While Alfalfa is a relatively expensive crop, the first cutting usually returns about double the cost of seeds, lime, fertilizer and planting. A good method is to lime the land and plant an annual legume crop that can be thoroughly disked, not turned, in preparing the alfalfa seed bed. Use 20 to 35 pounds (not more) borax per acre and drill August 20 to October 1, or February 15 to March 25, 25 to 40 pounds of thoroughly inoculated seeds per acre. Roll or cultipack after seeding. At seeding time use 1,200 pounds 2-12-12 and 8-10 tons barnyard manure if available and not weed infested. Apply 400 pounds 0-12-12 annually thereafter. Cut before ¼ flowers open. Always leave the alfalfa stand 6 inches tall or more for winter since any closer cutting invariably results in severe damage. If your stand of alfalfa becomes thin or weak sow 3 to 5 lbs. Orchard grass per acre to help control weeds and increase production. We handle only premium quality seeds. Supplies of good seeds will be extremely limited. Please write for prices.

BORAX. Prices: 25 lb. bag $2.00; 100 lb. bag $6.00.

F87 White Blossom Sweet Clover Adapted to a wide variety of soils; is used for pasture, for forage, for ensilage, for bees, for soil improvement. Especially good as a manure crop and to inoculate the soil in preparation for a crop of alfalfa. The roots break up, aerate and drain stiff subsoils and add humus. Spring sowings will yield a crop the following fall and two crops the following year. The first season it grows 1½ to 2½ feet high, but if cut when 6 inches high it stools out and makes a more tender growth for grazing. Sow 15 pounds per acre July to October or February, March. **Prices: lb. 60c; 2 lbs. $1.00; 5 lbs. $2.00; 10 lbs. $3.85, postpaid. Not prepaid 10 lbs. $3.40; 25 lbs. $8.25; 100 lbs. or more at 32c lb.**

F86 Aliske Clover We offer only premium quality northern grown seeds of hardy strains. Used mostly in mixtures but when properly handled produces heavy tonnage of highly nutritious hay or grazing. Sow 2 to 5 pounds per acre in mixtures or 12 to 15 pounds alone, early spring or fall. **Prices: lb. 80c; 2 lbs. $1.40; 5 lbs. $3.25; 10 lbs. $6.25, postpaid. Not prepaid 10 lbs. $5.75; 25 lbs. $13.75; 100 lbs. or more at 53c lb.**

F80 White Dutch Clover Because of its spreading habit and persistent year 'round growth White Dutch is invaluable for lawn and pasture use. It grows in all soils and will grow both in the shade and open areas responding to lime and fertilizers recommended for other clovers. Like other clovers White Dutch enriches the soil while furnishing nutritious grazing. Sow 6 to 8 pounds per acre alone or 2 to 3 pounds with other clovers or grasses. **Prices: lb. $1.50; 2 lbs. $2.80; 5 lbs. $6.50; 10 lbs. $11.95, postpaid. Not prepaid 10 lbs. $11.50; 25 lbs. $27.50; 100 lbs. or more at $1.05 lb.**

F82 Red Clover (N. C. Grown) One of the most productive of the clovers. Well adapted to our piedmont soils. Especially valuable in pasture mixtures. Sow early spring or fall 20 pounds per acre. Lime and fertilizer as for other clovers. **Prices: lb. 90c; 2 lbs. $1.75; 5 lbs. $4.00; 10 lbs. $7.85, postpaid. Not prepaid 10 lbs. $7.40; 25 lbs. $18.00; 100 lbs. or more at 70c lb.**

F83 Crimson Clover Should be sown from August to October. When sown by itself, 25 to 30 pounds are required to the acre; sown with grain or vetches, 15 pounds would be sufficient. **Write for prices.**

F89 Ladino Clover More Popular Every Year. A perennial clover of exceptional merit for pastures, especially on moist, fertile land. Recovers rapidly from grazing or clipping and is leafy and succulent. A complete recovery after grazing often takes place in two weeks. Its growing season is as long as that of any other legume. Like all clovers, Ladino succeeds best on well limed, fertile and somewhat moist land. Sow 5 to 6 pounds per acre alone or 1 to 3 pounds in mixtures. **Prices: lb. $2.85; 2 lbs. $5.40; 5 lbs. $13.25; 10 lbs. $26.00, postpaid. Not prepaid 10 lbs. $25.50; 25 lbs. $63.50; 100 lbs. or more at $2.50 lb.**

F95 Sericea Lespedeza Scarified and recleaned. This is the perennial lespedeza being grown so largely over the south. Its greatest asset is that it grows on the poorest soils without fertilizer or lime and while it steadily improves the land, it produces an abundance of nutritious hay if cut when tender. **Prices: lb. 55c; 2 lbs. $1.00; 5 lbs. $1.95; 10 lbs. $3.65, postpaid. Not prepaid 10 lbs. $3.20; 25 lbs. $7.75; 100 lbs. or more at 30c lb.**

F93 Kobe Lespedeza A variety particularly adapted to lowlands and lighter soils. The leaves and stems are slightly coarser making a heavier hay crop. This variety is recommended by the N. C. Experiment Stations for all but the mountainous regions of North Carolina, South Carolina and Virginia. Sow 30 to 40 lbs. per acre. Responds to liming and fertilizing. **Prices: 100 lb. bags $18.00. Write for quantity prices.**

F92 Korean Lespedeza Korean Lespedeza will grow on any soil, wet or dry, rich or poor, sour or sweet. Unexcelled for hay crop since it will produce from 2 to 4 tons of good hay per acre on a good thick even stand. It is almost equal to alfalfa in feeding value, and compares favorably in fineness, palatability and protein content. A good stand will make one ton of hay per acre for each 4 to 5 inches above cutter bar. Korean Lespedeza is earlier than other lespedezas, this insures harvest before fall rains and early frost and gives time for seed bed preparation for small grain that fall. Sow 30 pounds of seed per acre February to April. **Prices: 100 lb. bag $13.50. Write for quantity prices.**

F57 Alta and F53 Kentucky 31 Fescues. Soil Conservation Service Photo.

F57 Alta Fescue A tall or giant Fescue adapted to a wide variety of soils and uses. Like most long lived grasses, growth is slow after germination and should not be grazed until 6 inches high. Once established Alta Fescue promises to be the most versatile and valuable grass in a generation. It is the highest yielding grass in virtually every experiment station where it has been tried; is palatable and grows over a longer period each year than other grasses. Alta has a remarkable resistance to drought and its dense, deep roots make it ideal for erosion control, soil building, weed control, roadside planting, athletic fields, parks, airports, etc. In combination with suitable legumes it produces an excellent almost year 'round pasture. Because it has no underground root stocks it cannot become a pest and is readily killed by plowing. Continued high yields will require feeding, especially nitrogen which may be supplied partly by seeding with clover. Seed in a prepared, firm seed bed fall or early spring 20 to 25 lbs. per acre alone; 10 to 15 lbs. with 3 lbs. Ladino, White or Sub Clover, or 15 lbs. Lespedeza. **Prices: lb. 80c; 2 lbs. $1.45; 5 lbs. $3.25; 10 lbs. $6.25, postpaid. Not prepaid 5 to 24 lbs. 60c lb.; 25 to 99 lbs. 57c lb.; 100 lbs. or more at 55c lb.**

HEGARI

F197 Hegari Recognized as the most valuable and widely adapted member of the sorghum family, and well suited to conditions in the Southern states. Hegari has great forage value for two reasons. First, because its high sugar content makes stalks and leaves highly palatable to livestock, and second, it yields heavily with its many broad leaves and substantial stalks. As an ensilage crop many acres are planted to Hegaria every year in the South. As a pasture crop, in thickly seeded plantings it pastures well and also makes good hay. Its largest use is in bundle feeding and it can be left shocked in the field until fed, or as is coming into more general practice, it is ground head, stalks and leaves through a hammer mill. Hegari makes a good substitute crop for corn, which it out yields on light soils, and it can be planted much later. **Prices: lb. 30c; 5 lbs. 85c, postpaid. Not prepaid, 10 lbs. $1.15; 25 lbs. $2.50; 100 lbs. or more at 9c lb.**

WYATT'S RECLEANED MILLETS

F186 Pearl, or Cat-Tail Millet One of the best and most nutritious of the continuous cutting green forage plants. It does well even on poor land, and surprisingly well in dry seasons. Plant April to August, 6 to 8 lbs. to the acre in rows 3 feet apart. **Prices: lb. 45c; 5 lbs. $1.45, postpaid. F146 Soy Bean, Ogden

SOY BEANS

CULTURE: Soy beans may be planted either broadcast or in drills. They grow equally well on light and heavy soils, but on heavy soils they should not be planted more than 1 to 1½ inches deep except in dry season. On light sandy soils plant deeper, but not more than 3 inches. Plant in April, May or June. Such large seeded varieties as Mammoth Yellow require 1 bushel or more per acre, whereas Laredo small seeded kind only require 1 peck to the acre.

F146 Ogden Ogden is considerably earlier than most beans and is consequently better adapted to rotations with small grains. Seedings as late as June in the Wake County trials made a substantial production of hay. Average bean yield for 6 tests at scattered points in the state during 1943 was 27.8 bushels per acre. Plants are nicely branched and for that reason are more desirable for hay than the coarser growing types. **Prices: 2 bu. bags $4.15 per bu.**

F150 Volstate A yellow seeded variety producing high yields of good oil beans. Plants are somewhat taller than Ogden and slightly less branched. For a hay crop or a crop that might be optional we would recommend Ogdens, but for a crop planted on light land and for combining we would recommend the Volstate owing to the height of the plant and the fact that the beans are somewhat bunched on the plant. **Prices: 2 bu. bags $3.85 bu.**

F304 Crotalaria, Giant Striata

F151 Virginia It is about twenty days earlier than Mammoth Yellow. The vines make a fine growth, are filled with pods, stand about three feet high, are easy to cut and easy to cure. **Prices: 2 bu. bags $3.85 per bu.**

PEANUTS

CULTURE: Soils: Well drained sandy loam, properly limed, is best. **Varieties:** Virginia Bunch and Jumbo Runners in the old belt of North Carolina and Virginia. Spanish, North Carolina Runner or Virginia Bunch in the Southern Coastal plains and counties bordering the Piedmont using Spanish, Tennessee Red, or North Carolina Runner if in doubt as to the ability of the soil to make the larger varieties. In the Piedmont the Spanish variety is recommended. Smaller varieties produce more oil per ton of nuts, however, on adapted soils the larger nuts produce more oil per acre. Use 35 lbs. small varieties; 45 lbs. large varieties (shelled) per acre. Buy 1-3 more nuts by weight in the shell for the desired amount of shelled nuts. Field tests show 27 per cent increase in yield when seeds are treated with Arasan. Average of 22 tests conducted in North Carolina showed $16.43 per acre increase return where peanuts were dusted 4 times with sulphur-copper dust, after deducting the cost of dusting.

HOW TO USE DILUTION TABLE

This Dilution Table indicates the quantities of any given spray material to add to a given quantity of water to give the desired dosage (strength) of spray.

All liquid or semi-liquid materials are proportioned directly on a liquid basis, i. e., 1 to 100 dilution indicates that one gallon of spray material should be diluted with water to make 100 gallons of diluted spray (or three tablespoonfuls to make one gallon of diluted spray).

Dry materials such as Lead Arsenate or "BORDO" are proportioned by mixing a given number of pounds of spray material with water to make each 100 gallons of diluted spray. To aid in mixing, the table shows the smaller quantities of dry materials in convenient household measuring units.

NOTE: When two or more spray materials are combined in one spray mixture the same water is used to dilute all the materials.

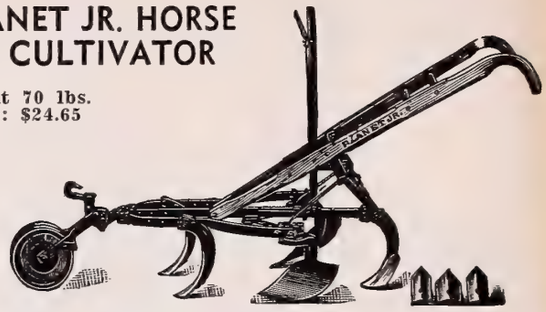
You can use it in very narrow rows—as close as 9 inches. You can use it in 42 to 48-inch rows by closing off the flow in three spouts and distributing through the other three—either on the right or left hand side.

Price: $41.75

The No. 220 spreads fertilizer from 4 to 30 inches on the ground. The hopper capacity is one bushel and the weight of the load is placed over the wheel, making it easy to push. The No. 220 will distribute 100 to 2,000 pounds of commercial fertilizer to the acre. Quantity per acre is regulated by a notched index on the right hand handle. The shut-off rod is operated from the same point.

NO. 9—PLANET JR. HORSE HOE AND CULTIVATOR

Weight 70 lbs.
Price: $24.65



These Planet Jr. Horse Hoes and Cultivators are stronger, better made and finished than any other one-horse cultivators, and enable you to increase your yield, because they do a greater variety of work in corn, potatoes, cotton, beans, tobacco and other crops requiring similar cultivation, and do it more thoroughly. Cultivate deep or shallow, in different width rows, and the extra long frames make them steady running. All Planet Jr. cultivator steels are made of beveled steel thickest down the center, making them self-sharpening, and the points retain their shape and strength. No. 9 has lever expander, allowing quick adjustment for different width rows. Used with or without a wheel.

NO. 9-D. Without wheel. Price: $21.95.

NO. 4-D—PLANET JR. PLAIN CULTIVATOR

Weight 49 lbs.
Price: $15.25

NO. 100-D—PLANET JR. PLAIN CULTIVATOR

We offer this Cultivator with the object of filling a definite need where lands are light or where farming is done on a modest scale. It weighs but 42 pounds. It will stand hard usage and do excellent work. A steady running tool and easy to handle and adjust.

Wyatt's Lawn Grass Seeds

A smooth green lawn is your home's greatest beauty asset. Deep, thorough preparation, proper fertilization and good seed are the most important steps toward a successful lawn. Read "10 Steps in Lawn Building," then select the mixture below, most suited to your needs. The results will please you.

Wyatt's Carolina
LAWN GRASS MIXTURE

F-60. WYATT'S CAROLINA MIXTURE of lawn grass seeds is an improvement on all the better mixtures offered heretofore at comparative prices. Our constant experiments have taught us just what grasses are best suited for eastern and southern states. The finest seeds of these varieties are carefully recleaned and blended into our Carolina Mixture so as to give the very best results obtainable. Sow 6 lbs. per 1000 sq. ft. **Prices: 1 to 4 lbs., 55c per lb.; 5 to 24 lbs., 50c per lb.; 25 to 99 lbs., 47c per lb.; 100 lbs. or more at 45c per lb., delivered.**

Wyatt's Colonial
LAWN GRASS MIXTURE

F-58. WYATT'S COLONIAL MIXTURE. The continued demand for a mixture of the finer leaved grasses has led us to prepare this Colonial Mixture consisting largely of the best varieties of bents and fescues. While the price per pound is higher, only a fraction of the quantity required of other grasses is required of the **Colonial Mixture,** leaving very little, if any, difference in the total cost for seeding. Once the lawn is seeded to these grasses of vastly superior beauty, all other varieties will be discarded. Use 3 lbs. per 1000 sq. ft. **Prices: 1 to 4 lbs., $1.00 per lb.; 5 to 24 lbs., 95c per lb.; 25 to 99 lbs., 90c per lb.; 100 lbs. or more at 85c per lb., delivered.**

Wyatt's Sunny South
LAWN GRASS MIXTURE

F-59. WYATT'S SUNNY SOUTH MIXTURE. For lighter soils and soils that become extremely dry, and in locations subjected to extreme heat during the summer months **Wyatt's Sunny South Mixture** of lawn grasses is recommended. The grass varieties used on golf greens over the entire South predominate in this mixture. Only the purest stocks are used. Sow 6 lbs. per 1000 sq. ft. **Prices: 1 to 4 lbs., 80c per lb.; 5 to 24 lbs., 75c per lb.; 25 to 99 lbs., 72c per lb.; 100 lbs., or more at 70c per lb., delivered.**

Wyatt's Shady Nook
LAWN GRASS MIXTURE

F-61. WYATT'S SHADY NOOK LAWN GRASS. A carefully blended mixture of grasses best adapted to shaded situations. Use 6 lbs. per 1000 sq. ft. Where the soil is acid from poor drainage or drippings from trees, occasional applications of agricultural lime should be made at the rate of 5 lbs. per 100 sq. ft. **Prices: 1 to 4 lbs., 65c per lb.; 5 to 24 lbs., 60c per lb.; 25 to 99 lbs., 57c per lb.; 100 lbs., or more at 55c per lb.**

F-49. HIGHLAND BENT. Not recommended for the South. Under favorable soil conditions in moist, cool places a beautiful velvety green sod, of the finest texture, is produced. Sow 3 lbs. per 1000 sq. ft. **Prices: 1 lb., $1.40; 5 lbs., $6.25, postpaid. Not prepaid, 10 lbs., $11.75; 25 lbs., $28.75; 100 lbs. or more at $1.10 per lb.**

F-48. BERMUDA. Thrives best on rich, loamy soils but will grow anywhere the soil is not too tightly packed. The surest variety on soils exposed to full sun. Used on all golf greens in the South where it responds beautifully to close clipping, ample watering and feeding. Sow 4 lbs. per 1000 sq. ft. **Prices: 1 lb., $1.40; 5 lbs., $6.50, postpaid. Not prepaid, 10 lbs., $12.00; 25 lbs., $28.75; 100 lbs. or more at $1.10 per lb.**

F-37. HULLED BERMUDA. You buy only the fine seed kernel itself in this pure, hulled Bermuda seed. Should be used only after the soil is warm in the spring and because it germinates much quicker it may be seeded later in summer. Sow 2 lbs. per 1000 sq. ft. **Prices: 1 lb., $1.95; 5 lbs., $9.00, postpaid. Not prepaid, 10 lbs., $17.00; 25 lbs., $41.25; 100 lbs. or more at $1.60 per lb.**

F-51. CARPET. Beautiful, dark green, flat growing grass of spreading habit and excellent for the low, moist soils of the coastal areas. Tolerant to shade. Sow 4 lbs. per 1000 sq. ft. **Prices: 1 lb., $1.05; 5 lbs., $4.50 postpaid. Not prepaid, 10 lbs., $8.00; 25 lbs., $19.50; 100 lbs. or more at 75c per lb.**

F-40. KENTUCKY BLUE. Very dark glossy green and remaining green longer than other lawn varieties. Ideal for lawns but requires deep, fertile, alkaline soil. Use lime and 4-12-12 fertilizer regularly. Never cut close during hot, dry seasons. Sow 3 lbs. per 1000 sq. ft. **Prices: 1 lb., $1.05; 5 lbs., $4.50, postpaid. Not prepaid, 10 lbs., $8.00; 25 lbs., $19.50; 100 lbs. or more at 75c per lb.**

F-46. CHEWINGS FESCUE. Best for dense shade. Very fine leaved, dark green grass which, once established, withstands the poor dry soil under trees better than most others. Sow 4 lbs. per 1000 sq. ft. **Prices: 1 lb., 95c; 5 lbs., $4.00, postpaid. Not prepaid, 10 lbs., $7.00; 25 lbs., $17.00; 100 lbs. or more at 65c per lb.**

F-52. RED TOP. A fine leaved variety of the bent family best suited to moist, fertile soils. Sow 2 lbs. per 1000 sq. ft. **Prices: 1 lb., $1.05; 5 lbs., $4.50, postpaid. Not prepaid, 10 lbs., $8.00; 25 lbs., $19.50; 100 lbs. or more at 75c per lb.**

F-43. RYE GRASS (Annual.) The quickest germinating and fastest growing grass for lawn use. May be seeded any month and will germinate and produce a green lawn until killed by warm weather. Sow 10 lbs. per 1000 sq. ft. **Prices: 1 lb., 35c; 5 lbs., $1.15, postpaid. Not prepaid, 10 lbs., $1.70; 25 lbs., $4.00; 100 lbs. or more at 15c per lb.**

F-80. WHITE DUTCH CLOVER. A most dependable lawn subject. Stays green almost the year round, and if limed and fertilized improves the soil and serves as a nurse crop for grasses. Sow 1 lb. per 1000 sq. ft. **Prices: 1 lb., $1.25; 5 lbs., $5.50, postpaid. Not prepaid, 10 lbs., $10.00; 25 lbs., $24.50; 100 lbs. or more at 96c per lb.**

Ten Steps in Lawn Building

1—Break or plow deep, with subsoil or similar plow to prevent burying top soil—then level or grade as needed.

2—Apply the equivalent of 3 heavy, green cover crops or 3 inches weed free manure or both if available.

3—Apply lime as needed up to 50 lbs. per 1000 sq. ft. and fertilizer, 40 lbs. per 1000 sq. ft.

4—Pulverize and smooth surface.

5—Seed 6 lbs. Carolina, Sunny South or Shady Nook, or 3 lbs. Colonial mixture per 1000 sq. ft., between September 1 and March 1.

6—Soak thoroughly but slowly to avoid moving seeds. Keep moist until grass is up. Soak occasionally during dry periods.

7—Mow Bermuda and rye grasses close and often; Blue grasses and fescues no closer than 2 inches nor more often than necessary, particularly during hot, dry seasons.

8—Compost clippings with liberal amount of sand and return to lawn in light applications as mulching during summer.

9—Feed at 6 to 8 week intervals from Feburary through November with 20 to 40 lbs. per 1000 sq. ft., high grade fertilizer or 50 to 100 lbs. per 1000 sq. ft. sheep manure, or both. Always sprinkle after feeding.

10—Apply additional seeds as needed with regular feedings.
